Client: Battelle  
Project: JPL GW Mon. 2Q10/G486090  
Sample Matrix: Water

Service Request No.: P1001729  
Date Received: 05/18/10

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier III validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

One water sample was received for analysis at Columbia Analytical Services on 05/18/10. The sample was received in good condition and consistent with the accompanying chain of custody form. The sample was stored in a refrigerator at 4°C upon receipt at the laboratory.

Nitrosamines by EPA Method 521

No anomalies associated with the analysis of these samples were observed.

1,4-Dioxane by EPA Method 8270C

**Matrix Spike Recovery Exceptions:**

The control criteria for matrix spike recovery of 1,4-Dioxane for sample Batch QC were not applicable. The analyte concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

No other anomalies associated with the analysis of these samples were observed.

## Qualifiers

|   |   |
|---|---|
| U | The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.                       |
| J | The result is an estimated concentration that is less than the MRL (PQL), but greater than or equal to the MDL.   |
| B | Analyte detected in the method blank above MRL (PQL).   |
| E | Estimated; result based on response which exceeded the instrument calibration range.                              |
| N | The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed. |
| D | The reported result is from a dilution.   |
| X | See case narrative.   |
