Final

January 2022

This technical memorandum summarizes the results of the third quarter 2021 groundwater sampling event completed as part of the groundwater monitoring program at the National Aeronautics and Space Administration (NASA) Jet Propulsion Laboratory (JPL). The third quarter 2021 groundwater sampling event was conducted from July 16 through July 30, 2021.

INTRODUCTION

During the third quarter 2020 sampling event, groundwater samples were collected from 16 of 25 JPL monitoring wells (MWs), both on- and off-facility and analyzed for volatile organic compounds (VOCs), total chromium, hexavalent chromium [Cr(VI)], and perchlorate. Figure 1 shows the locations of the groundwater monitoring wells.

Groundwater samples were shipped to BC Laboratories, Inc., in Bakersfield, California, for chemical analysis. BC Laboratories, Inc. is certified by the State Water Resources Control Board (SWRCB). Sample collection procedures and sample analyses were conducted in accordance with the approved *Work Plan for Performing a Remedial Investigation/Feasibility Study*¹. All samples were analyzed for VOCs, perchlorate, and metals within the analytical holding times with four exceptions; Cr(VI) in MW-17 (Screen 3), MW-24 (Screens 1 and 3), MW-25 (Screen 5) were rejected for non-compliance with method holding times. Data validation indicated that all the data from the third quarter 2021 groundwater monitoring event were acceptable for their intended use of characterizing aquifer quality except for those noted above. The data validation reports are included in Attachment 2.

Table 1 summarizes analytical results for VOCs and perchlorate and Table 2 summarizes analytical results for metals from the last five sampling events. Table 3 summarizes VOC and perchlorate concentrations in production wells located near the JPL facility from the last five sampling events. No tentatively identified compounds (TICs) were detected in the samples collected during the third quarter of 2021.

Figures summarizing the results from the third quarter 2021 sampling event are included in this technical memorandum. Figure 2 shows the lateral extent of carbon tetrachloride concentrations in groundwater, and Figure 3 provides a cross-section detailing the horizontal and vertical extent of carbon tetrachloride. Figure 4 shows the lateral extent of perchlorate concentrations in groundwater, and Figure 5 provides a cross-section detailing the horizontal and vertical extent of perchlorate in groundwater. Figure 6 shows the lateral extent of tetrachloroethene (PCE) concentrations in groundwater. Figure 7 shows the lateral extent of trichloroethene (TCE) concentrations in groundwater. Figure 8 shows groundwater elevation contours from the third quarter 2021 event and groundwater flow directions.

Attachment 2 contains the data validation reports performed by an independent subcontractor, Environmental Standards, Inc. Attachment 3 contains the laboratory analytical reports prepared by BC Laboratories, Inc. Attachment 4 contains the groundwater sample collection field logs for the JPL groundwater monitoring wells. Attachment 7 presents historical perchlorate, VOC, and metals concentrations from 1996 to present. A summary of the well construction details for the JPL groundwater monitoring wells is included in Attachment 8.

The groundwater monitoring wells have been grouped into four categories:

- On-facility source area wells (MW-7, MW-13, MW-16, and MW-24);
- Other on-facility wells (MW-6, MW-8, MW-11, MW-22, and MW-23);
- Perimeter off-facility wells (MW-1, MW-3, MW-4, MW-5, MW-9, MW-10, MW-12, MW-14, and MW-15 [MW-1 and MW-9 are only sampled during the second and fourth quarter events]); and
- Off-facility wells (MW-17, MW-18, MW-19, MW-20, MW-21, MW-25, and MW-26).

MW-2 was decommissioned in July 2018. Well MW-2 had not been sampled during the groundwater monitoring program since it was replaced with well MW-14.

ON-FACILITY SOURCE AREA WELLS

On-facility source area wells consist of wells that have historically contained the highest concentration of site-related chemicals. This group of wells is located within the JPL facility (on-facility) and consists of monitoring wells MW-7, MW-13, MW-16, and MW-24.

The source area treatment system has been operating since 2005 and addresses groundwater beneath the JPL facility, which has historically contained the highest concentrations of perchlorate and VOCs (i.e., the source area). Operation of the source area treatment system appears to have resulted in a significant reduction of chemicals of interest in wells MW-7, MW-16, and MW-24, which are located within the treatment zone. Additional details regarding chemical concentrations in the on-facility source area wells are presented below.

It should be noted that during the third quarter 2021, MW-7, MW-13, and MW-16 were dry and therefore not sampled.

ALL WELL CATEGORIES (OTHER RESULTS)

- Comparing the second quarter 2021 to the third quarter 2021, groundwater elevations decreased by an average of 3.12 feet.
- The shallow standpipe wells MW-5, MW-6, MW-7, MW-8, MW-10, MW-13, and MW-16 were dry and could not be sampled during the third quarter 2021. This is the third time MW-8 and MW-10 have been dry since they were first measured in 1996. This is the fourth consecutive quarter MW-5 and MW-7 were dry. This is the fifth consecutive quarter MW-6, MW-13, and MW-16 were dry.
- The uppermost sampling port (i.e., Screen 1) in multi-port monitoring wells MW-4, MW-12, MW-14, MW-20, MW-21, MW-23, and MW-26 were dry and could not be sampled during the third quarter 2021. In addition, MW-17 (Screen 1) and MW-18 (Screen 1), which are only sampled during the second and fourth quarters but are measured for water levels during the first and third quarters, were also dry. This is the third time that MW-4 (Screen 1), MW-23 (Screen 1), and MW-26 (Screen 1) were dry since first being measured. This is the fifth consecutive quarter the uppermost screen in MW-12 was dry. This is the eighth consecutive quarter the uppermost screens in MW-14, MW-20, and MW-21 were dry.
- Groundwater elevations recorded in the JPL monitoring wells showed a steady decline from the first and second quarters of 2011 through the fourth quarter of 2014 at which time the levels approached and/or exceeded historic lows last recorded in 1996 and 1997. During the period between first quarter 2015 and second quarter 2019, groundwater elevations fluctuated on a seasonal basis. During the period between second quarter 2019 and second quarter to third quarter 2021, groundwater elevations declined an average of 47 feet. As a result, levels have reached or exceeded historic lows last recorded in 1996 and 1997. Groundwater elevations will continue to be closely monitored.
- Groundwater level measurements collected during the third quarter 2021 indicate that groundwater gradients and flow directions are generally consistent with previous observations (see Figure 8).

Notes												
DUP(E)	Field Duplicate											
NA	Not analyzed											
NE	Not established											
TTHM	Chloroform is regulated under the state and federal MCL of 80 µg/L for Total Trihalomethanes (TTHMs); the MCL applies to the sum of all four THMs (Bromodichloromethane, Bromoform, Dibromochloromethane, and Chloroform) as an annual average											
B	Analyte is present in method blank											
UB	Result should be considered "not-detected" because it was detected in a method blank or equipment blank at a similar level.											
E	Analyte concentration is above calibration range											
J	Analyte concentration is an estimated value											
U	Analyte was analyzed for but not detected at or above the stated limit											
UJ	Analyte was analyzed for but not detected; analyte concentration is an estimated value
